

CAMARON Security & RLS Audit v2

Release: **v2-2026-05-01**

Generated: **2026-05-01 05:58 UTC**

This report consolidates the Supabase security linter, RLS policy review, and edge-function hardening checks for the CAMARON platform. The diagonal watermark and footer timestamp on every page allow recipients to verify the document's freshness.

Summary

Category	Count	Notes
Errors	0	No blocking findings
Warnings	239	Accepted SECURITY DEFINER helpers (baselined)
RLS-protected tables	All	Owner-scoped + leadership SELECT via has_role()
Edge functions hardened	Yes	JWT validation, rate-limit, error telemetry

Scope

- Supabase RLS policies on all public schema tables
- SECURITY DEFINER function executable surface
- Edge function signature validation (payments-webhook)
- Admin action audit log retention and access controls
- Public-facing rating endpoints validation bounds

Verification

Every page bears a diagonal **CAMARON • OFFICIAL** watermark and a footer with the UTC generation timestamp and release id. PDF metadata embeds the same timestamp under */Subject* for programmatic verification.
